

BHAVESH CHAUHAN

Senior Software Engineer · Backend & Distributed Systems · Remote-Ready

Bikaner, Rajasthan, India | +91 9784490023 | chouhanbhavesh9@gmail.com | linkedin.com/in/bhavesh029 | github.com/bhavesh029 | bhaveshchauhan.me

Backend-focused Senior Software Engineer with 4+ years building cloud-native microservices, event-driven systems, and scalable APIs on AWS. Experienced in Kafka, Redis, PostgreSQL, and Node.js across healthcare, edtech, and logistics domains. Currently leading a team of 4 engineers at HabileLabs and building Akira.

EXPERIENCE

Senior Software Engineer · **HabileLabs** · Jaipur, India January 2026 – Present

Healthcare domain · Node.js, Next.js, PostgreSQL, Payload CMS, Devbox

- Identified and resolved a critical security vulnerability on **day 2** — without any KT or codebase walkthrough — by independently tracing the root cause and delivering a fix within the same day.
- Lead a team of 4 engineers** — onboarding new joiners, unblocking juniors, conducting code reviews, and driving technical decisions for a US healthcare client platform.
- Delivered 50 caregiver and client operational reports across frontend and backend within 18 days — shipped end-to-end with no prior codebase context.
- Streamlined the Git workflow by introducing pre-push hooks enforcing TypeScript checks, ESLint, and build validation — eliminating recurring PR rejections from the US review team and reducing merge cycle time.
- Took full codebase ownership after the US team transitioned off — resolved critical legacy bugs, onboarded 2 new engineers, and established development standards for the team.
- Integrated client-facing APIs with third-party healthcare service providers, collaborating fully async across US and India time zones.

Freelance Software Engineer · **Independent Contract** · Remote April 2025 – December 2025

Internal tooling · React, Node.js, NestJS, PostgreSQL, Supabase, Vercel

- Built an internal operations tool for a manufacturing client — a React + Node.js dashboard for inventory tracking, role-based user access management, and automated operational reporting.
- Implemented role-based access control (RBAC) with scoped views for factory staff, supervisors, and admins — ensuring each role only accessed relevant data.
- Designed automated report generation reducing manual tracking effort and giving management real-time visibility into stock levels and team activity.
- Handled full delivery independently — from requirements gathering to deployment on Vercel with Supabase-backed PostgreSQL database.

Backend Engineer II · **Newton Classroom** · Hyderabad, India November 2023 – April 2025

EdTech SaaS · Node.js, AWS Lambda, PostgreSQL, Excel.js

- Engineered the full Transport System — student application workflow, real-time vehicle/route tracking, bus capacity management, and bulk data import — benefitting **3,000+ students** and saving 15+ admin hours weekly.
- Reduced compute costs by **25%** by leveraging AWS Lambda for scheduled background tasks.
- Accelerated financial report generation by **23%** by eliminating performance-intensive lateral joins and removing unused columns from complex SQL queries.
- Implemented salary structure breakdown by tax regime, bonus handling, and advance payment management with automated EMI repayment tracking.
- Built a generalized report utility using Excel.js that reduced per-report boilerplate code and cut generation time by **20%**.

Software Engineer · **Trigsy Technologies** · Bangalore, India June 2022 – November 2023

Location-based platform · Node.js, PostgreSQL (PostGIS), GitHub Actions

- Designed and optimized a location-based search API using PostgreSQL PostGIS with advanced indexing, improving query performance by **35% and reducing response time by 30%**.
- Implemented secure phone-based authentication and a two-way number masking system ensuring user privacy in customer-partner interactions.
- Automated CI/CD pipelines with GitHub Actions for pre-deployment code quality checks and streamlined deployment.

Backend Engineer Intern · **YAV Technology** · Remote, India *January 2021 – March 2022*

E-learning platform · Node.js, REST APIs

- Developed APIs for an e-learning platform supporting **5,000+ active users**, working fully remote in a distributed team.
- Integrated secure payment processing and streamlined transactional workflows.

PROJECTS

Akira — Intelligent Financial Operations Platform · *Solo Founder · In Progress (2025–Present)*

NestJS, React 19, Supabase (PostgreSQL + pgvector), Google Gemini 2.5 · [GitHub](#)

- Building an AI-powered B2C SaaS that automatically extracts structured transaction data from bank statements (including scanned and password-protected PDFs) using Google Gemini 2.5 Flash and Gemini Vision multimodal.
- Architected a unified PostgreSQL + pgvector database on Supabase — storing both relational business data and 768-dimensional AI embeddings in a single database, designed for future RAG query support.
- Implemented a full AI analytics dashboard — cashflow trends, top expense categories (donut chart), AI-generated financial insights, detected recurring subscriptions, and anomaly alerts with time-range filtering.
- Designed for DPDP compliance (India's data privacy law) using CASCADE deletes across the full entity tree — ensuring Right to Erasure is handled at the database schema level.
- Production-grade setup: CI/CD pipelines, environment-separated deployments, structured logging, and full API documentation across Auth, Accounts, Documents, Transactions, and Analytics endpoints.

SKILLS

Languages & Frameworks: TypeScript, JavaScript, Java · Node.js, Express.js, NestJS, React, Next.js

Cloud & DevOps: AWS (Lambda, EC2, S3, RDS, SNS, SES, SQS) · Kafka · Docker · GitHub Actions · CI/CD · Vercel · Supabase

Databases & Caching: PostgreSQL, MySQL, MongoDB · Redis · pgvector · TypeORM, Sequelize

AI & Integrations: Google Gemini 2.5 (Vision + Flash) · RAG / pgvector · PDF extraction · LLM integrations

System Design: Microservices, Event-Driven Architecture, Distributed Systems, Caching Strategies, REST APIs, JWT/OAuth2

Testing & Tools: Jest, Mocha, Postman · Git · Payload CMS · Devbox

EDUCATION

B.Tech in Information Technology · Bikaner Technical University · 2018 – 2022

Secured 3rd place (out of 47 teams) in College Hackathon — awarded a one-year Red Hat subscription.
